Subject Index of Volume 29

Artificial neural networks
artificial neural networks for power system steady-state voltage instability evaluation, 85
comparison of neural network models for fault diagnosis of power systems, 99

Back-propagation network
comparison of neural network models for fault diagnosis of power systems, 99
Backup power
a new power conditioning strategy, 217

Cables
the external thermal resistance of power cables in a group buried in non-uniform soil, 35
Component connection model
an inherent parallel algorithm for analyzing power system transient characteristics on a multiprocessor system, 121
Consumer outage costs
sectoral outage cost estimation using an emergency action strategy for reliability optimization studies, 111

Directional relays
an efficient method for generation, storage and retrieval of data for the coordination of directional relays, 147
Discrete Fourier transform technique
power system harmonic estimation: a comparative study, 91
Distribution feeders
Monte Carlo simulation applied to distribution feeder reliability evaluation, 193
Distribution system loss reduction
network reconfiguration in distribution systems using simulated annealing, 227
Distribution system planning
comparative analysis of security concepts for urban medium voltage cable distribution networks, 43
Distribution system reliability
distribution system reliability and restoration analysis, 203
comparative analysis of security concepts for urban medium voltage cable distribution networks, 43
Distribution system restoration
restoration of electrical power supply through an algorithm and knowledge based system, 171
a new algorithm for service restoration in large-scale urban distribution systems, 181
distribution system reliability and restoration analysis, 203
Distribution system security
comparative analysis of security concepts for urban medium voltage cable distribution networks, 43

Economic dispatch
environmentally constrained economic dispatch using linear programming, 155

Eigenstructure assignment
an output feedback static var controller for the damping of generator oscillations, 9
Emergency action strategy
sectoral outage cost estimation using an emergency action strategy for reliability optimization studies, 111
Emergency power restoration
distribution system reliability and restoration analysis, 203
Emissions dispatch strategy
environmentally constrained economic dispatch using linear programming, 155
EMTP simulations
an accurate fault location algorithm using synchronized sampling, 161
Environmental constraints
environmentally constrained economic dispatch using linear programming, 155
Expert systems
use of an expert system shell to develop a power plant simulator for monitoring and fault diagnosis, 27

Fault diagnosis
use of an expert system shell to develop a power plant simulator for monitoring and fault diagnosis, 27
comparison of neural network models for fault diagnosis of power systems, 99
Fault location
an overview of digital fault location algorithms for power transmission lines using transient waveforms, 17
an accurate fault location algorithm using synchronized sampling, 161
Field oriented control
performance analysis of a closed-loop field oriented cage induction motor drive, 69
Filtering techniques
an overview of digital fault location algorithms for power transmission lines using transient waveforms, 17
Fuzzy power flow analysis, 105

Generating capacity planning
a comparison of three fundamentally different methods for generating capacity reliability evaluation, 1
Generation system reliability
a comparison of three fundamentally different methods for generating capacity reliability evaluation, 1

Harmonic effects
effects of harmonic sources on customer loads, 51
Harmonic estimation
power system harmonic estimation: a comparative study, 91
Harmonic load flow
effects of harmonic sources on customer loads, 51
Harmonic pollution
a new power conditioning strategy, 217

Induction motor drive
performance analysis of a closed-loop field oriented cage induction motor drive, 69

Inverter fed motor drive
performance analysis of a closed-loop field oriented cage induction motor drive, 69

Knowledge based system
restoration of electrical power supply through an algorithm and knowledge based system, 171

Least-absolute-value technique
power system harmonic estimation: a comparative study, 91
Least-square technique
power system harmonic estimation: a comparative study, 91
Line flow equations
network reconfiguration in distribution systems using simulated annealing, 227
LINKNET
an efficient method for generation, storage and retrieval of data for the coordination of directional relays, 147
Load analysis
the analysis of voltage regulation in residential distribution networks using the beta distribution model, 213
Load forecasting
a medium-term probabilistic model for forecasting loads with a small proportion of air conditioners, 57
Load model
effects of harmonic sources on customer loads, 51
Loss reduction
network reconfiguration in distribution systems using simulated annealing, 227

Monte Carlo simulation
Monte Carlo simulation applied to distribution feeder reliability evaluation, 193

Network reconfiguration
network reconfiguration in distribution systems using simulated annealing, 227
Neural network models
comparison of neural network models for fault diagnosis of power systems, 99

Oscillation damping
an output feedback static var controller for the damping of generator oscillations, 9

Parallel processing
an inherent parallel algorithm for analyzing power system transient characteristics on a multiprocessor system, 121
Planning
comparative analysis of security concepts for urban medium voltage cable distribution networks, 43
a medium-term probabilistic model for forecasting loads with a small proportion of air conditioners, 57
Power conditioning
a new power conditioning strategy, 217
Power flow
fuzzy power flow analysis, 105
Power plant simulation
use of an expert system shell to develop a power plant simulator for monitoring and fault diagnosis, 27
Power system cables
the external thermal resistance of power cables in a group buried in non-uniform soil, 35
Power system expansion planning
a medium-term probabilistic model for forecasting loads with a small proportion of air conditioners, 57
Power system protection
an overview of digital fault location algorithms for power transmission lines using transient waveforms, 17
an efficient method for generation, storage and retrieval of data for the coordination of directional relays, 147

Radial basis function network
comparison of neural network models for fault diagnosis of power systems, 99
Relaying systems
an overview of digital fault location algorithms for power transmission lines using transient waveforms, 17
Reliability
a comparison of three fundamentally different methods for generating capacity reliability evaluation, 1
comparison analysis of security concepts for urban medium voltage cable distribution networks, 43
Monte Carlo simulation applied to distribution feeder reliability evaluation, 193
distribution system reliability and restoration analysis, 203
Reliability optimization
sectoral outage cost estimation using an emergency action strategy for reliability optimization studies, 111
Restoration
restoration of electrical power supply through an algorithm and knowledge based system, 171
a new algorithm for service restoration in large-scale urban distribution systems, 181
distribution system reliability and restoration analysis, 203

Seasonal model
a medium-term probabilistic model for forecasting loads with a small proportion of air conditioners, 57
Security
comparative analysis of security concepts for urban medium voltage cable distribution networks, 43
Simulated annealing technique
network reconfiguration in distribution systems using simulated annealing, 227
Speed control
performance analysis of a closed-loop field oriented cage induction motor drive, 69
Static var controller
an output feedback static var controller for the damping of generator oscillations, 9
Statistical modelling
the analysis of voltage regulation in residential distribution networks using the beta distribution model, 213
Switching operations
a new algorithm for service restoration in large-scale urban distribution systems, 181
Synchronized sampling
an accurate fault location algorithm using synchronized sampling, 161

Thermal resistance
the external thermal resistance of power cables in a group buried in non-uniform soil, 35
Time domain models
an accurate fault location algorithm using synchronized sampling, 161

Transient analysis
an inherent parallel algorithm for analyzing power system transient characteristics on a multiprocessor system, 121
Transient/mid-term stability
types of voltage instability and the associated modelling for transient/mid-term stability simulation, 131
Transmission line protection
an overview of digital fault location algorithms for power transmission lines using transient waveforms, 17

Underground cables
the external thermal resistance of power cables in a group buried in non-uniform soil, 35

Vector control
performance analysis of a closed-loop field oriented cage induction motor drive, 69
Voltage collapse
artificial neural networks for power system steady-state voltage instability evaluation, 85
Voltage instability
artificial neural networks for power system steady-state voltage instability evaluation, 85
types of voltage instability and the associated modeling for transient/mid-term stability simulation, 131
Voltage regulation
the analysis of voltage regulation in residential distribution networks using the beta distribution model, 213
Voltage-source converters
a new power conditioning strategy, 217

Waveform relaxation method
an inherent parallel algorithm for analyzing power system transient characteristics on a multiprocessor system, 121
